## UI PLAN

### Interactive Elements

The four interactive elements I will be incorporating for this project are:

a Mobile Hamburger Menu, Accordion, “Read More” Open and Close Button, and an API to show information about various dogs breeds.

### Mobile Hamburger Menu

The user will interact with this element when the site is in a mobile-view. The hamburger menu will start off collapsed and upon a click on its icon, will expand to show the various menu options. When the user mouses over one of the options they will change to a contrasting color and return to it’s original state on mouse leave. If the user chooses to click on a menu option, the site will redirect and the hamburger menu will appear collapsed again. If the user just wants to exit the menu, they will click the hamburger icon again, it will go back to it’s collapsed position.

### Accordion

The Accordion feature will be used in a FAQ section of the site. Each one of the tabs will be frequently asked questions, and upon click, will expand with more information. When another tab is clicked, the previously opened tab will close and the next will open.

### “Read More” Open and Close Button

The “read more” will be used to allow users to read more about the veterans and their companions. When clicked, the veterans story will expand and the user can read more about the person and their furry companion. Once finished, the user can click the close button and the information will collapse. That way the web page can be compact and users can expand on information at their own discession.

### My API

The API I will be using is <http://quotes.rest/>. This API will place an inspirational quote at the end of both the home and about pages. This quote will change every time the page is refreshed.
